

Build a First-class and World-renowned High-end Petrochemical Industrial Base

Sun Bo

**Senior Minister of Dongying Municipal Government,
Director of Administration Center of the Yellow River
Delta Sustainable Development Institute of Shandong
Province**

General Information about Dongying

One of the most concentrated areas of petrochemical industry in China

- Ranks top among prefecture-level cities of China in terms of per capita GDP in 2017.
- The output value of its chemical industry exceeded 650 billion yuan.
- 25 enterprises were listed among the top 500 Chinese petroleum and chemical enterprises.

Enabling Conditions for Developing Petrochemical Industry in Dongying

First, strong industrial base.

Maintains long-term cooperative relations with world-renowned enterprises Shandong Province

— 129 petrochemical enterprises above designated size with their

— Main business revenue exceeded 466.65 billion yuan in 2017, including 17 companies over 10 billion yuan and 22 over 5 billion yuan.

60 million tons of crude oil resources

109.7 billion tons of rock salt resources

Port

As a national first-class open port, Dongying Port has a handling capacity of 60 million tons and is being built into a large port of 100 million tons. The 100,000 ton channel project and the 2 x 250,000 ton single point mooring quay is under construction.

Third, convenient transportation and logistics.

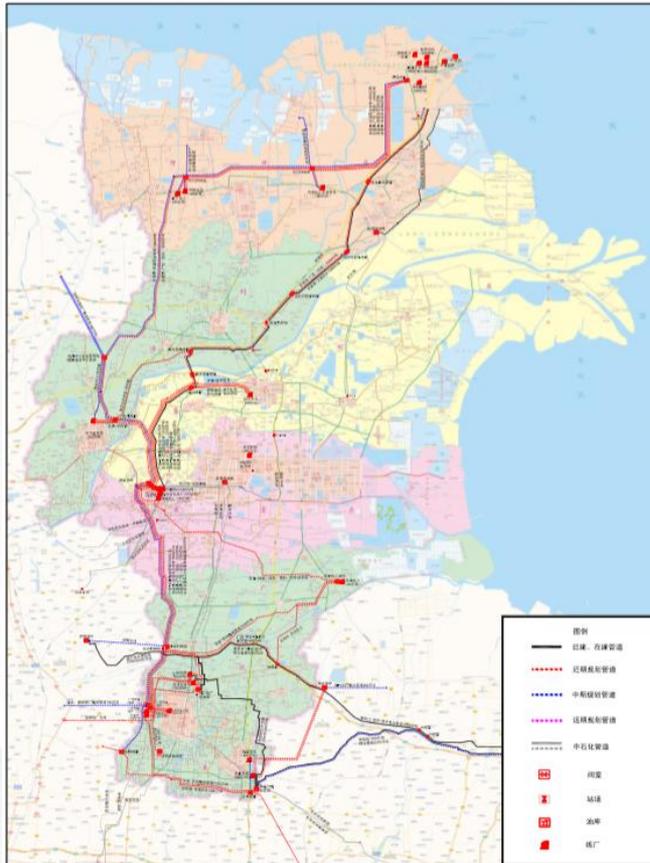

Railway

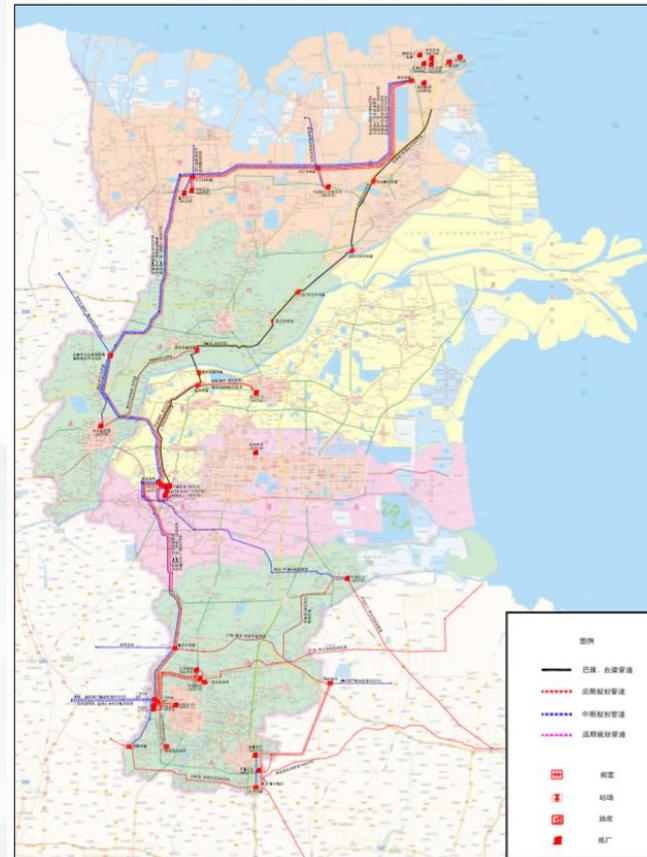

Pipeline

An oil product transportation network of “four vertical, two horizontal and ten branch lines”

Fourth, suitable construction space.

Relatively independent space

Dongying Port High-end Petrochemical Industrial Base is surrounded by sea on three sides with no resident in the neighborhood of 20 km. The area that can be used to develop chemical industry reaches 126.77 square kilometers.

》》 Fifth, broad market hinterland.

Sixth, strong policy support.

National Sustainable Development Plan for Resource-based Cities (2013-2020)

Development Plan of High-end Petrochemical Industrial Base in Northern Shandong

Layout Plan for Petrochemical Industry

Plan for Developing the Petrochemical Industry in the Next Step

Objectives

Dongying will target at building large-scale modern petrochemical industrial clusters with reasonable layout and structure, high quality and efficiency, strong expanding and facilitating capacity and powerful driving force. We aim to build the Dongying Port High-end Petrochemical Industrial Base into a world-renowned and first-class domestic petrochemical industrial park. It is our objective that the output value of the city's petrochemical industry would exceed 1 trillion yuan, 2-3 10-million-ton refining and chemical integration projects be built, the industrial cluster be further perfected and its regional competitiveness further improved by 2025.

First, adhere to whole-element and high-standard planning and construction

Learn from the advanced experience of domestic and foreign well-known chemical industry parks in construction and management. According to the goal of “five integrations” in terms of products and projects, public projects and ancillary ones, logistics and transport, security and environmental protection, and management and service, we will aim high in the planning and construction of the base, make rational layout of industries and projects, and strive to build petrochemical industry clusters with complete elements.

Second, carry out the integration and reorganization of refining and chemical enterprises

15

Choosing big projects rather than small; integration and reorganization; entering industrial zones or parks; pursuing high-end development

- 10-million-ton-scale fine refining and chemical integration projects
- large-scale high-efficiency high-end petrochemical projects

Joint development by refining enterprises in Dongying

2 million tons PX

1.2 million tons Ethylene

Fourth, construct intelligent factories and intelligent parks

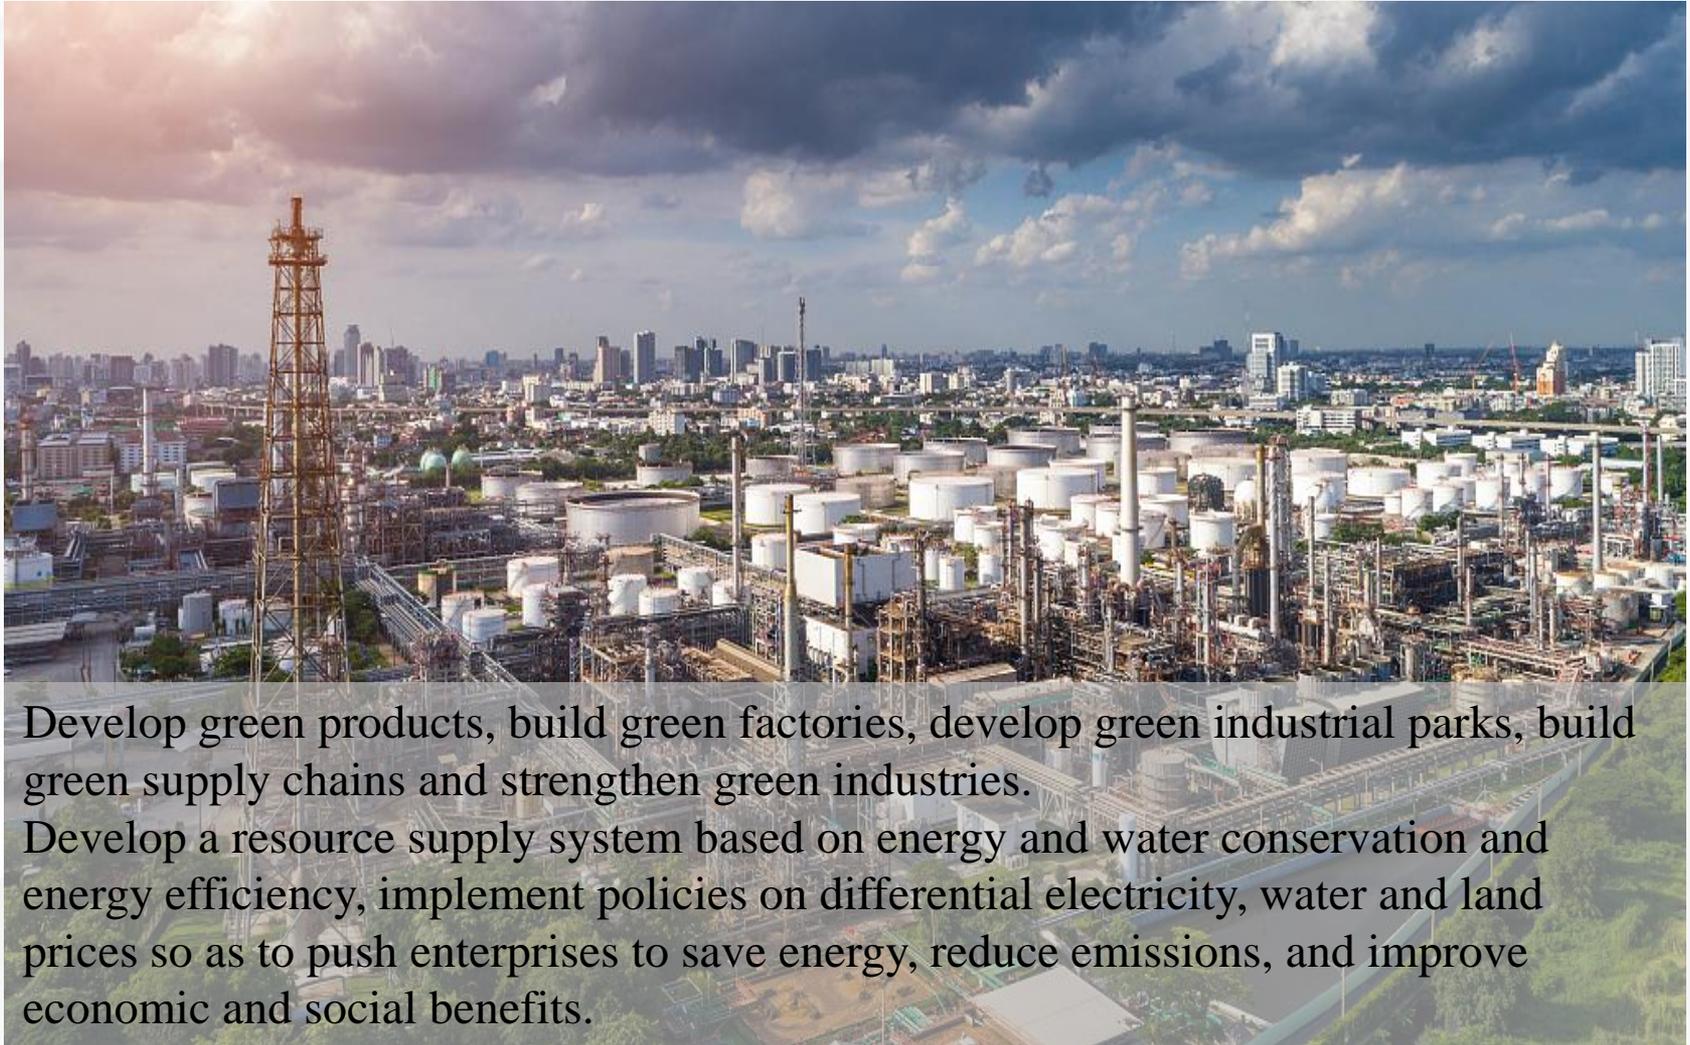

Enterprises

Build smart factories

Industrial Parks

Build smart parks

Develop green products, build green factories, develop green industrial parks, build green supply chains and strengthen green industries.

Develop a resource supply system based on energy and water conservation and energy efficiency, implement policies on differential electricity, water and land prices so as to push enterprises to save energy, reduce emissions, and improve economic and social benefits.

**Sincerely invite all guests to visit Dongying and welcome
all entrepreneurs to invest and develop in Dongying.**

**Wish the conference a complete success and wish you all
the best!**

Thank you!
